

Cancel page

The component should be a pop up callable through a button (I'm going to add a dedicated button during the day in the app)

Please use

[React native overlay element](#)

(we already implement the library in the app, no need to import again)

Please center in the screen the Popup

For the 2 buttons, you will find a ValidationButton Component in App/Components.

Please respect the dimension based on our grid system, specially for the dimensions of the buttons

To use it, you can use our custom component

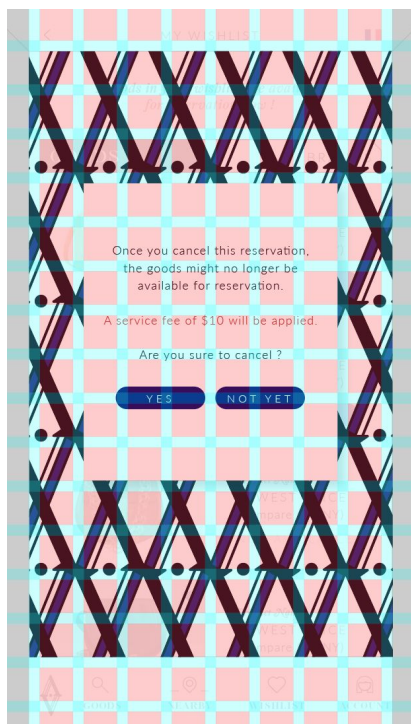

```
<CustomSectionContainer isFullHeight>
```

```
<CustomSection xSquares={8} ySquares={2}>
```

info: the xSquares and ySquares correspond to the number

of red square.

For the font family, use LatoLight in the file App/Theme/Fonts.js by import

For the background (it should cover the whole screen for every device, i'm going to send you the image
